

Snake Lab

Coding Camp for Kids · 3 days + bonus Saturday

Build, code, and battle your own snake game.

In one week, kids go from playing a classic single-player snake to writing a JavaScript bot that competes head-to-head against their friends' bots in a tournament. Real code. Real servers. Real games they can keep playing at home.

What kids learn, day by day

Day 1 — Hello Snake

Build a classic snake game. Discover that 'the snake' is just a list in memory; what a game loop is; how code becomes pixels on screen.

Day 2 — Snake Arena

Multiplayer. See what a server is and what a WebSocket carries. Watch kids' join messages roll in on the instructor's terminal live.

Day 3 — Code Your Snake

Each kid writes a JavaScript function that controls a snake. Afternoon: tournament. The bot that survives longest wins.

Saturday (bonus) — Family Day

King-mode (snake eats snake) and fog-of-war tournaments. Parents play too. Kids show off the code they wrote on Day 3.

What every kid leaves with

- Three games they helped build, live online so they can keep playing at home
- A working JavaScript bot they wrote themselves
- A real understanding of arrays, loops, servers, and how to start their own projects
- Confidence that 'code' is something they can write — not just consume

AGES

9 and up

DATES

To be announced (first trial run)

BRING

Just an iPad or laptop

CLASS SIZE

Up to 8 kids

PRICE

\$120 – \$150 · lunch included

LOCATION

TBA
